

ADVANCE DEVOPS EXP 8

Name:Laksh Sodhai

Class:D15A

Roll No:59

Aim: Create a Jenkins CICD Pipeline with SonarQube / GitLab Integration to perform a static analysis of the code to detect bugs, code smells, and security vulnerabilities on a sample Web / Java / Python application.

Step 1: Download sonar scanner

<https://docs.sonarsource.com/sonarqube/latest/analyzing-source-code/scanners/sonarscanner/>

The screenshot shows the SonarScanner CLI documentation page. The left sidebar contains a navigation menu with options like 'Homepage', 'Try out SonarQube', 'Server installation and setup', 'Analyzing source code', and 'Scanners'. The main content area is titled 'SonarScanner CLI' and features a table with columns for 'SonarScanner' and 'Issue Tracker'. The table lists version '6.1' with a date '2024-06-27' and provides download links for various operating systems: 'Linux x64', 'Linux AArch64', 'Windows x64', 'macOS x64', 'macOS AArch64', and 'Docker'. Below the table, there is a section for 'Release notes' and a paragraph explaining that the SonarScanner CLI is used when there is no specific scanner for the build system. It also mentions that the SonarScanner does not yet officially support ARM architecture.

[ner/](#) Visit this link and download the sonarqube scanner CLI.

Extract the downloaded zip file in a folder.

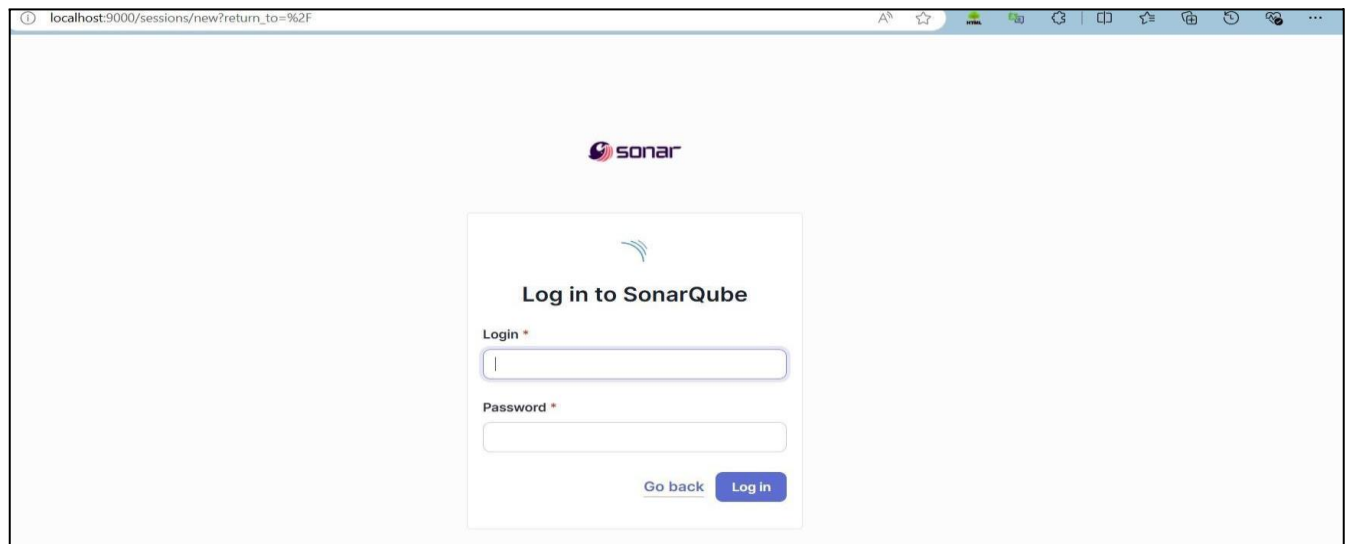

1. Install sonarqube image

Command: **docker pull sonarqube**

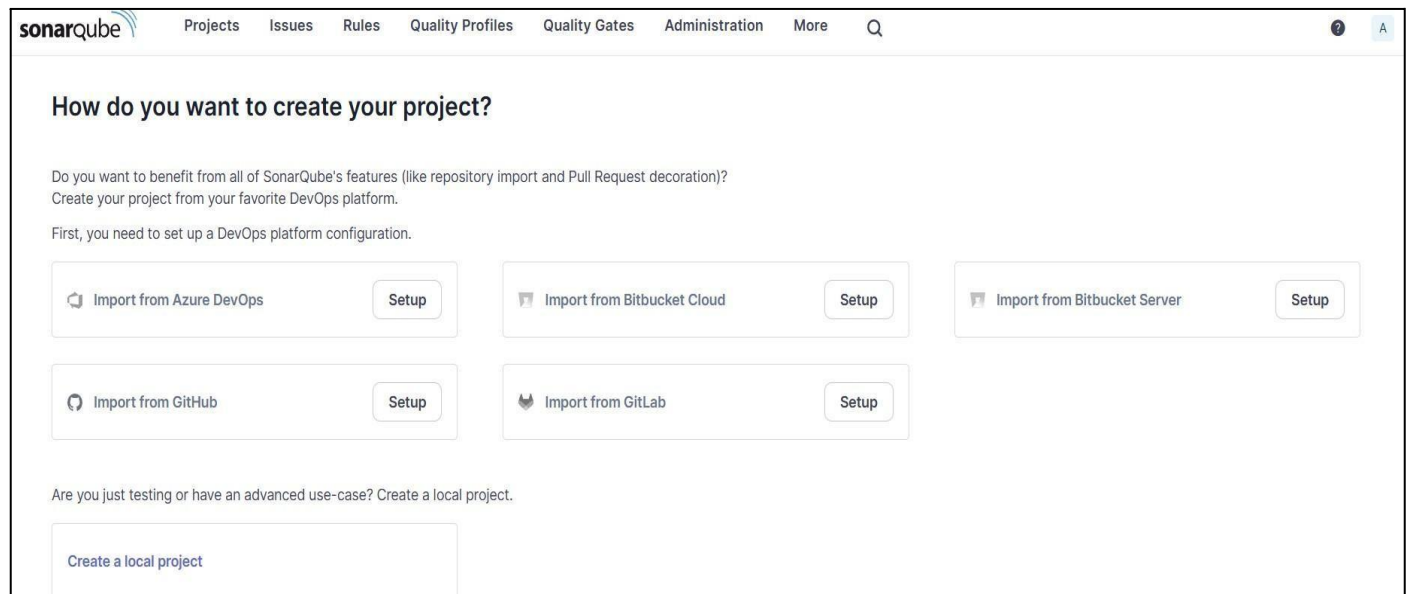

```
C:\Windows\System32>docker pull sonarqube
Using default tag: latest
latest: Pulling from library/sonarqube
Digest: sha256:72e9feec71242af83faf65f95a40d5e3bb2822a6c3b2cda8568790f3d31aecde
Status: Image is up to date for sonarqube:latest
docker.io/library/sonarqube:latest
```

2. Once the container is up and running, you can check the status of

SonarQube at localhost port 9000.

3. Login to SonarQube using username admin and password admin.

4. Create a manual project in SonarQube with the name sonarqube

1 of 2

Create a local project

Project display name *

sonarqube ✓

Project key *

sonarqube ✓

main

The name of your project's default branch [Learn More](#) 

Cancel **Next**

2 of 2

Set up project for Clean as You Code

The new code definition sets which part of your code will be considered new code. This helps you focus attention on the code that has changed since the previous version. Learn more: [Defining New Code](#) 

Choose the baseline for new code for this project

☒ **Use the global setting**

Previous version

Any code that has changed since the previous version is considered new code.

Recommended for projects following regular versions or releases.

☐ **Define a specific setting for this project**

☐ **Previous version**

Any code that has changed since the previous version is considered new code.

5. Open up Jenkins Dashboard on localhost, port 8080 or whichever port it is at for you.

The screenshot shows the Jenkins Dashboard at localhost:8080. The left sidebar contains navigation links: New Item, Build History, Project Relationship, Check File Fingerprint, and Manage Jenkins. The main area displays a table of build history with columns: S (Status), W (Weather icon), Name, Last Success, Last Failure, and Last Duration. The table lists five builds: Devops Pipeline, devops_exp6_pipeline, maven_exp_6, maven_project, and myNewJob. Below the table, there are filters for 'Icon' (S, M, L) and a 'Build Queue' section showing 'No builds in the queue.' and a 'Build Executor Status' section showing '1 Idle' and '2 Idle' executors.

S	W	Name	Last Success	Last Failure	Last Duration
✓	☀	Devops Pipeline	1 mo 13 days #4	N/A	0.61 sec
✓	☀	devops_exp6_pipeline	24 days #1	N/A	2.2 sec
✓	☁	maven_exp_6	17 days #13	17 days #12	9.2 sec
✗	☁	maven_project	1 mo 13 days #3	1 mo 7 days #10	12 sec
✓	☀	myNewJob	24 days #1	N/A	0.49 sec

6. Go to Manage Jenkins and search for SonarQube Scanner for Jenkins and install it.

The screenshot shows the Jenkins Plugins page. The left sidebar has links: Updates (25), Available plugins, Installed plugins, and Advanced settings. The main area shows a search bar with 'sonarq' and an 'Install' button. Below the search bar, a table lists the 'SonarQube Scanner 2.17.2' plugin, which was released 6 months and 29 days ago. The table includes links for 'External Site/Tool Integrations' and 'Build Reports'. A description states: 'This plugin allows an easy integration of SonarQube, the open source platform for Continuous Inspection of code quality.'

Install	Name	Released
<input type="checkbox"/>	SonarQube Scanner 2.17.2 External Site/Tool Integrations Build Reports This plugin allows an easy integration of SonarQube, the open source platform for Continuous Inspection of code quality.	6 mo 29 days ago

The screenshot shows the Jenkins Download progress page. The left sidebar has links: Updates (25), Available plugins, Installed plugins, and Advanced settings. The main area shows the 'Download progress' section with a 'Preparation' step that includes 'Checking internet connectivity', 'Checking update center connectivity', and 'Success'. Below this, the 'SonarQube Scanner' and 'Loading plugin extensions' steps are both marked as 'Success'. At the bottom, there are two options: 'Go back to the top page (you can start using the installed plugins right away)' and 'Restart Jenkins when installation is complete and no jobs are running'.

Download progress

Preparation

- Checking internet connectivity
- Checking update center connectivity
- Success

SonarQube Scanner **Success**

Loading plugin extensions **Success**

→ [Go back to the top page](#)
(you can start using the installed plugins right away)

→ ☐ Restart Jenkins when installation is complete and no jobs are running

7. Under Jenkins ‘Manage Jenkins’ then go to ‘system’, scroll and look for **SonarQube Servers**

and enter the details.

Enter the Server Authentication token if needed.

In SonarQube installations: Under **Name** add <project name of sonarqube> for me
adv_devops_7_sonarqube

In **Server URL** Default is <http://localhost:9000>

Name

sonarqube

Server URL

Default is http://localhost:9000

http://localhost:9000

Server authentication token

SonarQube authentication token. Mandatory when anonymous access is disabled.

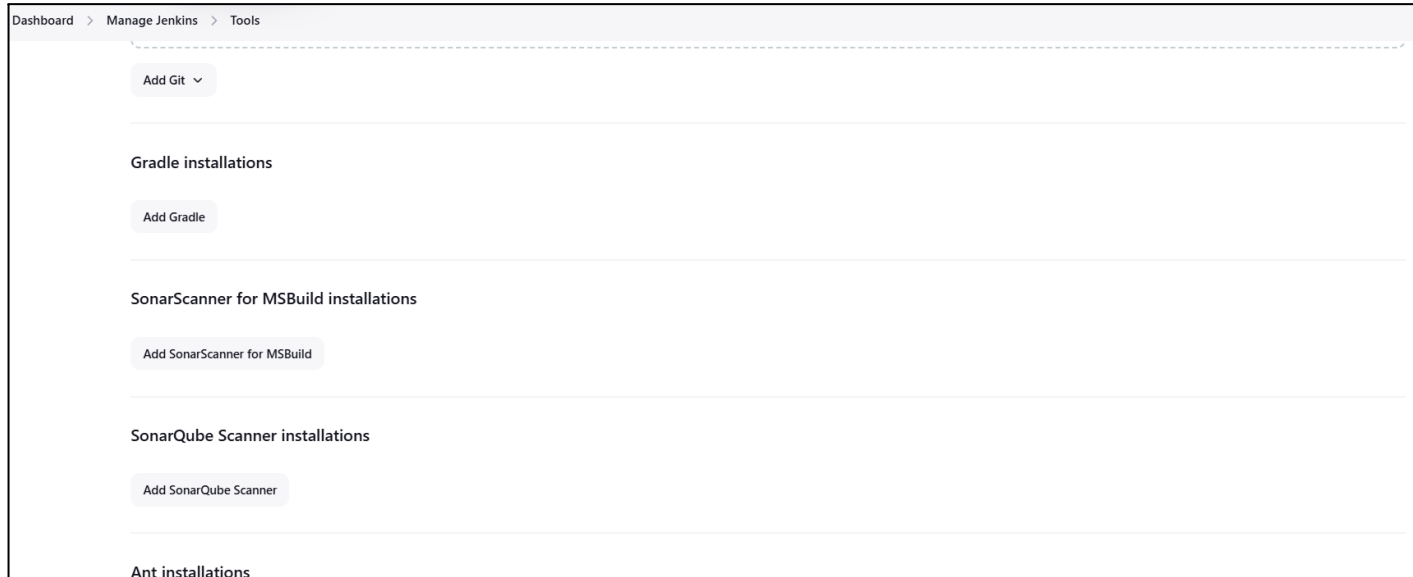

- none -

+ Add

Advanced

8. Search for SonarQube Scanner under Global Tool Configuration. Choose the latest configuration and choose Install automatically.

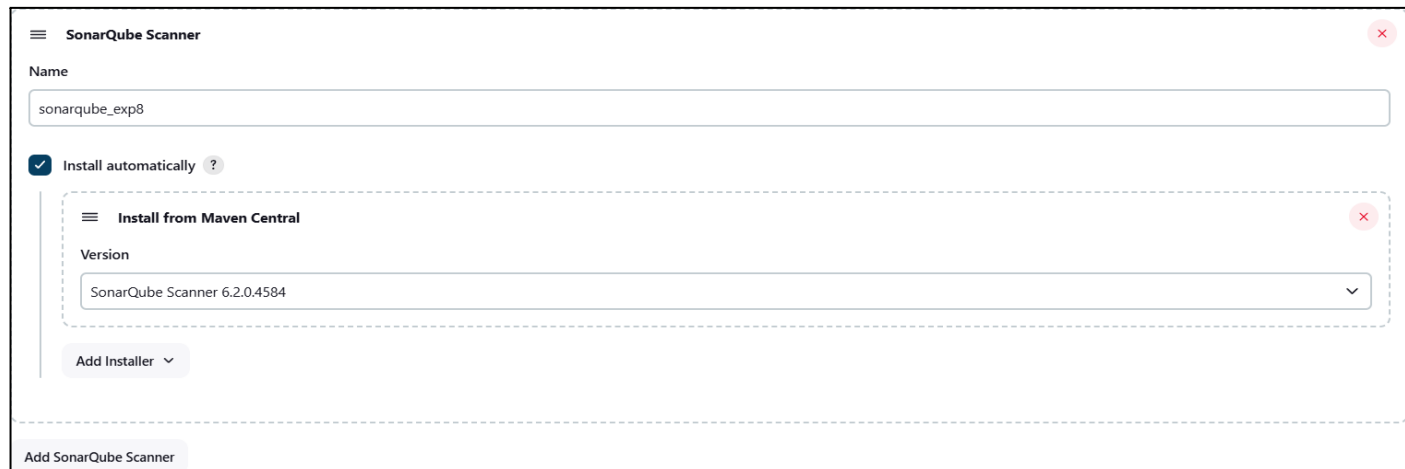

Dashboard > Manage Jenkins > Tools

The screenshot shows the Jenkins 'Tools' configuration page. The breadcrumb navigation at the top reads 'Dashboard > Manage Jenkins > Tools'. The page is divided into several sections, each with an 'Add' button and a dropdown menu:

- Add Git** (dropdown arrow)
- Gradle installations**
 - Add Gradle**
- SonarScanner for MSBuild installations**
 - Add SonarScanner for MSBuild**
- SonarQube Scanner installations**
 - Add SonarQube Scanner**
- Ant installations**

Check the “Install automatically” option. → Under name any name as identifier → Check

The screenshot shows the 'SonarQube Scanner' configuration dialog. It has a title bar with a hamburger menu icon, the text 'SonarQube Scanner', and a close button (X). The main content area includes:

- A **Name** field with the value 'sonarqube_exp8'.
- A checked checkbox for **Install automatically** with a help icon (?) to its right.
- A dashed box containing:
 - A hamburger menu icon and the text **Install from Maven Central**.
 - A **Version** field with a dropdown menu showing 'SonarQube Scanner 6.2.0.4584'.
 - An **Add Installer** button with a dropdown arrow.

At the bottom of the dialog is an **Add SonarQube Scanner** button.

the “Install automatically” option.

9. After configuration, create a New Item → choose a pipeline project.

New Item

Enter an item name

Select an item type

Freestyle project
Classic, general-purpose job type that checks out from up to one SCM, executes build steps serially, followed by post-build steps like archiving artifacts and sending email notifications.

Maven project
Build a maven project. Jenkins takes advantage of your POM files and drastically reduces the configuration.

Pipeline
Orchestrates long-running activities that can span multiple build agents. Suitable for building pipelines (formerly known as workflows) and/or organizing complex activities that do not easily fit in free-style job type.

OK

10. Under Pipeline script, enter the following:

```
node {
stage('Cloning the GitHub Repo') {
    git 'https://github.com/shazforiot/GOL.git'
}

stage('SonarQube analysis') {
    withSonarQubeEnv('<Name_of_SonarQube_environment_on_Jenki
ns>') {
        sh """
            <PATH_TO_SONARQUBE_SCANNER_FOLDER>/bin/sonar-scanner \
            -D sonar.login=<SonarQube_USERNAME> \
            -D sonar.password=<SonarQube_PASSWORD> \
            -D sonar.projectKey=<Project_KEY> \
            -D sonar.exclusions=vendor/**,resources/**,**/*.java \
            -D sonar.host.url=<SonarQube_URL>(default: http://localhost:9000/)
            """
        }
    }
}
```

}

It is a java sample project which has a lot of repetitions and issues that will be detected by SonarQube.

Definition

Pipeline script
